

Stockfolio:

Portfolio Management
Simplified

Introduction:

Stockfolio is a multi-platform portfolio management tool allowing users to track and analyze their stocks, bonds, real estate, and cryptocurrencies in one place

- Designed for novice and experienced investors
- Provides real-time market updates, custom alerts, and visual analytics
- Accessible via web and mobile with secure cloud sync

The Problem:

Why we built Stockfolio:

- Investors use multiple apps or spreadsheets to track different assets
- It can be difficult to evaluate total net worth or risk exposure
- Therefore, we decided to create a unified system that supports diverse asset classes

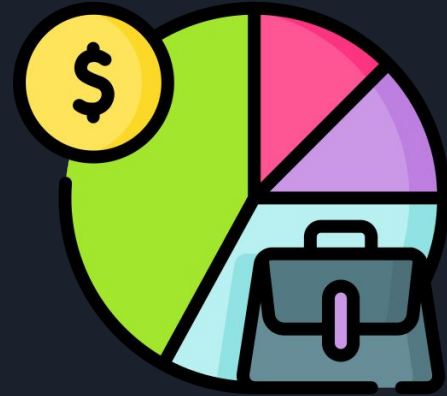

The Solution: Stockfolio!

Stockfolio bridges the gap with a single app, as it is:

- ✓ A unified platform for multiple asset classes
- ✓ Real-time price tracking and analytics
- ✓ A user-friendly, web and mobile-first experience
- ✓ Cloud-based storage and secure login across devices

Stockfolio Features:

Watchlist Management:

- Add/remove/edit assets, including stocks, bonds, real estate, and crypto

Portfolio Tracking & Visualization:

- Track gains/losses, asset allocation, generate pie charts

Real-Time Data Integration:

- Live updates from stock, crypto, and real estate markets

Monetizing Stockfolio

Free Tier:

- Basic investment tracking (limited assets, fewer alerts)
- Display Ads

Premium Tier:

- Real-time price updates
- Unlimited assets
- Advanced analytics (performance graphs, KPIs)
- Priority alerts and insights
- Exportable reports
- No Ads

Future Improvements in Stockfolio

Cloud Services Used: Google Cloud Platform

Compute Engine: Ubuntu Linux Server

Website Hosting: Apache Web Server

Database Storage: MariaDB Database Server

Connection to DB: Node.js

Data Retrieval: API usage to import data for Stocks and Cryptos.
